Streamlines

# Introduction: our contribution

---

- A flexible line style model for visualizing streamlines.
- Supports interactive manipulation.
- A fast GPU implementation.
- Inspired by illustrations.

# Introduction: depth-dependent halos

---

# Introduction: depth-dependent halos

# Introduction: depth-dependent halos

---

# Line style model

---

Subdivision of line strips into bands

Provide the granularity

Visual properties (color, width, and distance offset)  
can be manipulated independently.

# Local attribute mapping

---

Mapping of local flow attributes (temperature, velocity, etc.) to visual properties:

- Band color (i.e., color maps)
- Band width

# Flexible band shapes

---

For repeating shape patterns:

- Shape mapping functions
- Line shape attribute

$$s_x = \frac{x}{l} \bmod 1$$

# Flexible band shapes

---

For repeating shape patterns:

- Shape mapping functions
- Line shape attribute

$$s_x = \frac{x}{l} \bmod 1$$

Integration time as attribute:

- Velocity encoded as shape frequency

# Results

Shape function

Shape function

Shape function

Bonus: animation

# Discussion

---

- Fast and flexible GPU implementation.
- Interactive manipulation of line style parameters.
- Positive feedback in an informal evaluation with a fluid mechanics expert.

# Conclusion

---

- Introduction of a flexible illustrative line style model for visualizing flow streamlines
- Fast GPU implementation
